EL25
Expanded capacity. Enhanced versatility.

The EL25 is beautifully engineered for private residences, yet powerful and adaptable enough to be used in apartment buildings, condo complexes, office parks and commercial sites.

The EL25 is capable of accepting up to 2,000 totally flexible codes. These codes can be programmed as either directory codes or access codes, making the EL25 ideal for virtually any installation. Unlike other systems, the EL25 may be purchased as a base unit or can be ordered with optional plug-in modules. This allows you to choose only the plug-in modules you need depending on the specifics of the job—enabling you to offer custom solutions right off the shelf without special orders.

Optional modules let you expand the system to fit your specific needs. The Wiegand output module lets you add card readers and remote keypads. Our RF module provides convenient access through gates or doors with Passport™ transmitters. Plus, the system is now designed to automatically detect the addition and location of each new plug-in module, making installation and programming faster and easier than ever before.

Intelligent features. Built-in functionality.

Attractive and durable
Elegant and sophisticated by design, the EL25 features impressive styling to complement even the most upscale properties. One step further, it's designed to be tough, dependable and vandal-resistant. Available in three fashionable finishes—silver, nickel and gray. For added flexibility, the EL25 can be mounted either horizontally or vertically as the installation requires.

Four built-in relays
Four independent relays can be set to activate doors or gates, and can be set to function as strike, control, shunt, alarm or CCTV relays. Additionally, each relay can have an activation time between 1 and 300 seconds.
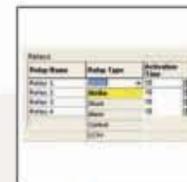

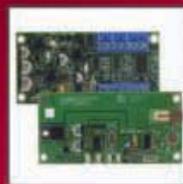

Simplified installation
Detachable hinge design lets you mount the unit on the back plate while making your wiring connections.

Simplified programming
The entire system may be set up and maintained remotely via modem or via a direct connected laptop with the versatile Versa XS™ 2.0 access control programming software. Additionally, the EL25 can be programmed from the main keypad on the front of the unit.

Options that fit your needs.

Plug-in modules
Optional plug-in adaptability lets you expand the EL25 to work with many different types of access devices. A two-reader Wiegand module lets you add card readers and remote keypads.

Exclusive security
An optional black and white or color CCTV camera ensures added security. A color low-lux camera compatible with DVRs is also available.

Passport™ control
Passport™ remote controls provide one-touch access when used with the EL25 and an RF module. Transmitters may be programmed to operate LiftMaster® garage door openers, gate operators and commercial door operators.

Lighted paper directory
A separate lighted paper directory is also available in gray, nickel, silver or black.
