

# CLEANSAFE BOLLARD

## Innovation to protect the public

Currently, a large part of the world is not only facing the challenge of protecting people against terror attacks with vehicles but also against pathogens (like corona virus) and/or a potential bio terrorism threat. With our longstanding know how we have developed a product to fulfill these requirements. The result is our new CleanSafe bollard, a symbiosis of our fixed high security bollards and the possibility to protect yourself from pathogens. Our innovative CleanSafe Bollard includes a disinfectant dispenser which can be used by touch or contact-less. This gives pedestrians the opportunity to disinfect hands when passing by. As an option, the bollard can also be equipped with LED lighting.

Ordinarily, our high security bollards are positioned at central traffic points in the city centre which gives the advantage of making them highly visible with hand height disinfectant dispenser and vandal proofing all at the same time.

Citizens spending a relaxed day downtown can use it directly after shopping or before visiting their favourite ice cream parlor.

The CleanSafe bollard is also ideal for sensitive infra-structures like embassies, banks or places with large gatherings of people such as fairs and sports stadiums.
